

04-151

We're a 3 year old ISP with a market of several thousand users that have few alternatives to Cable and DSL. We service our area with Wireless but are finding spectrum less and less available in the unlicensed bands. We beleive that additional spectrum should be made available on an unlicensed band. I support the notion that Unlicensed Operation in the Band 3650 - 3700 MHz ET Docket No. 04-151 is fundementally sound, but should be modified to allow outdoor, wireless Internet services to operate in that band. Aspenworks does not support the use of that band for other purposes such as cordless telephone handsets, medical applications or other industrial applications. A exclusion such that this band's noise floor does not rise will benefit the existing users of the band and insure that what has happened to 5.7 Ghz and 2.4 Ghz bands with the release of high powered cordless phones does not happen i.e., the increased noise floor reduces the effectivness of these spectrum.
